

INTEROFFICE CORRESPONDENCE

DATE: August 24, 1993
TO: J. A. Ciucci, Regulated Waste Ops, Bldg. T130B, X5841
FROM:  E. A. Keil, ER/FOM, Bldg. T891E, X3075
SUBJECT: ENVIRONMENTAL DRUM STORAGE REQUIREMENTS - EAK-012-93

The estimated number of drums that need to be placed in interim storage by 10/1/93 is 1705. The completion date of 10/1/93 is not a compliance date but due to weather conditions that could exist at that time and to stop further deterioration of these drums do to being stored outside. This does not include the current drilling programs of Well Abandonment and Replacement Program 93 (WARP), Operating Unit 2 Bedrock Program (OU2BR), and Systematic Evaluation Programs Special Borings (SB). The following is a proposed break down of drums according to priority.

<u>Program</u>	<u>Number of Drums</u>
OU2 (Exceedances)	81
OU1 (Exceedances)	58
SW (Exceedances)	77
IT UST	61
AS 995	17
OU4	46
Wind Site	10
Indiana Drums	135
IT WARP 92	315
PA drums	301
OU2 AAC drums	306
OU1 AAC drums	124
SW AAC drums	174
Total Drums	1705

The schedule for removing these drums I would like to see targeted is 200 drums per week which will allow for missed shipments due to inclement weather. I would also like to explore the possibility of using overtime to increase the drum shipments.

Thank you for your cooperation in this matter.
